APPROVAL PAGE

Generic Name: **INJECTION CIPROFLOXACIN (INTRAVENOUS) B.P**
Brand Name: **CIPROFLOXACIN INTRAVENOUS INJECTION 200mg/100mL**

Each 100 ml Contains:

Ciprofloxacin B.P. 200 mg

Water for injection B.P. q.s.

Packing Size: 100ml in a PVC pouch.

Shelf Life: 3 years, proceeding date of production.

PRODUCT MASTER FORMULA	**BML/QA/MFR/017**
BMR CODE. No.:	**BML/BMR/QA/017**
Review date:	**January, 2026**

MANUFACTURING CHECKLIST

1. **General Safety Procedures**
   - All staff should clean hands with antiseptic liquid soap, use disinfectants and dry them using hand dryers as per sop proper use of lavatory (BML-QDG-QA-008)
   - All staff should wear face masks, hand gloves, factory overalls and clean rubber shoes as per sop on gowning and use of change room (BML-QDG-QA-011)
2. **General Good Documentation Practice**
   - All manufacturing process activities should be recorded in the BMR
   - All documentation work should be recorded online and properly
   - All entries in the BMR should be legible and clear with no overwriting. If any mistake cross with a single line and rewrites the correct form, sign the error as per sop on document control and management (BML-QDG-QA-002)

3. **Cleaning/Sterilization**	Remark (Yes/No)	Comments (ok/Not ok)	Checked by	Verified by
• Ensure that all machinery and equipment have been cleaned according to their respective SOP's				
4. **Materials Availability** • Ensure sufficient demineralised water is available for cooling of Autoclave				
• Ensure sufficient WFI water is available for manufacturing of the batch				
• Ensure sufficient filters (**0.8 whatman, 0.45 and 0.2 Micron filters**) is available for manufacturing of the batch				
• Ensure that QC test materials and chemicals are available for in-process analysis				
• Ensure that primary packaging materials are available

MIXING INSTRUCTIONS PROCEDURE

Date:		Time Started	Time Stopped	Done by Operator	Checked by Supervisor	Verified by QA
1.	Transfer 800 Liters of WFI required into the appropriate mixing vat					
2.	Switch on the stirrer and add ciprofloxacin lactate followed by sodium chloride gradually until the total quantity is transferred into the water. Stir for 10 minutes					
3.	Stir until an homogenous solution is obtained					
4.	Switch off the stirrer and make the volume of the solution with sterile apyrogenic water to the batch volume					
5.	Switch on the stirrer and stir for 10 minutes					
6.	Request for the QC department to take a sample for in-process analysis					
7.	On QC department release, switch off the stirrer					
8.	Transfer the solution to the filling room through the Millipore filtration system					
9.	*N.B.* Use **0.8 whatman filter as pre-filter, then 0.45and 0.2 micron filters** for final filtration & record number of filter pads used.
