APPROVAL PAGE

Generic Name: Ferrous fumarate+ Vit B Complex

Brand Name: BIOMEDICAL BLOOD TONIC

Each 5ml Contains:

Ferrous Fumarate	50mg
Riboflavin	1mg
Thiamine Hydrochloride	4mg
Nicotinamide	18mg
Cyanocobalamin	2.5mcg
Pyridoxine Hydrochloride	2mg
Calcium D Panthotenate	6mg
Ascorbic Acid	1.5mg

Colour: Caramel

Packing Size: 200ml per Amber Colour Bottle duly labelled & packed in a Monocarton.

Shelf Life: 2 years from the date of manufacture.

PRODUCT MASTER FORMULA MANUAL NUMBER:	**BML/QA/MFR/018SYP**
BMR. No.:	**BML/BMR/QA/018SYP**
Review date:	**JANUARY, 2026**
Next Review Date:	**JANUARY, 2028**

Document Issued by: **Sign/Date:**	**Collected by:** **Sign/Date:**

Batch to be manufactured according to the Product Master Formula Record Number: **BML/QA/MFR/016SYP** without any modification / with the following modifications.

MANUFACTURING CHECKLIST

1. General Safety Procedures

- All staff should clean hands with antiseptic liquid soap, use disinfectant and dry them using hand dryers as per sop proper use of lavatory (BML-QDG-QA-008)
- All staff should wear face masks, hand gloves, factory overalls and clean rubber shoes as per sop on gowning and use of change room (BML-QDG-QA-019)

2. General Good Documentation Practice

- All manufacturing process activities should be recorded in the BMR
- Ensure proper line clearance is taken before processing new batch/product.
- All documentation work should be recorded online and properly.
- All entries in the BMR should be legible and clear with no overwriting. If any mistake cross with a single line and rewrite the correct form, sign the error as per sop on document control and management (BML-QDG-QA-002)
- Report about any deviations immediately to the Production Pharmacist.

3. Cleaning	**Remark (Yes/No)**	**Comments (ok/Not ok)**	**Checked by**	**Verified by**
• Ensure that all machinery and equipment have been cleaned according to their respective SOP's				
4. Materials Availability				
• Ensure sufficient demineralised water is available.				
• Ensure that **all** the packaging materials are available.

GENERAL INSTRUCTIONS

1. Ensure that the area, equipment and accessories are clean and line clearance is taken before starting the operation.
2. Gloves, nose masks are to be worn during manufacturing operations.
3. Environmental conditions and balance calibration and equipment logs are to be recorded properly.
4. Check the labels and weight of all materials as per the work order and in case of any discrepancy report immediately to the Production Pharmacist.
5. Enclose all dispensing labels of materials to BMR.

QC Demineralised water release slip reference number: …….

COMPOUNDING QUALITY CHECK LIST

Previous Product:	**B.NO:**	
Check List	**Checked by (Production)**	**Verified by (QA)**
Area Cleanliness (floor, walls, ceiling, risers)		
Check weighing balance, weights, scoops, spatulas, utensil are cleaned		
Check Syrup Preparation vessel, SS vessels, Buffer Tank are cleaned		
Check Filter Press is cleaned		
Check required Filter pads are cleaned and intact.		
Check Swab test analysis is carried out in case of product change over		
Check all previous batch/product materials are removed from the area		
Perform the compounding as per SOP BML-QDS-QA-019		
Environmental Conditions: Std. Temp: NMT 25°C ±2, Actual Temp: _____°C Std. RH: NMT 65 %±5, Actual RH: _____%

CONTROL COPY

Prepared By	Basiru I.M	Reviewed By	Agbowo L.M	Approved By	Koroma A
Sign / Date	03/01/2026	Sign/ Date	03/01/26	Sign / Date	03/01/26

Step No.			From	To	Done by Operator	Checked by Prod.Sup	Verified by QA
1.	Discharge about **1100litres** of **demineralised water** into the sugar melting tank and heat to about to about 80°C.						
2.	Dissolve **5.00kg** of **Sodium methyl paraben** and **1.25kg sodium propyl paraben** with the stirrer running.						
3.	Add **820.5kg** of **sucrose** into the sugar melting tank. Stir until it dissolves to form a clear solution.						
4.	Allow the sugar solution to cool to room temperature and filter through the bag filter into manufacturing vessel, and take about a quarter part into a separate stainless steel tank.						
5.	In a separate container, disperse **4.5kg** of **Xanthan gum** in **237.5kg** of **Glycerol**. Mix until it is lump free and add to the solution in the manufacturing vessel.						
6.	In a stainless steel tank, mix the quarter part sugar solution in step 4 above with **67.5kg** of **Aerosil** and **1.0kg** of **Polysorbate 80**. Mix until smooth and add to the bulk in the manufacturing vessel.						
7.	Dissolve **2.1kg** of **Thiamine hydrochloride** in **10litre** of **water** and transfer into the manufacturing vessel.						
8.	Dissolve **1.2kg** of **Pyridoxine hydrochloride** in **1litre** of **water** and transfer into the manufacturing vessel.						
9.	Dissolve **9.25kg** of **Nicotinamide** in **10litre** of **purified water** and transfer into the manufacturing vessel.						

10.	Dissolve **0.600kg** of **Riboflavin plain** in **10litre** of **purified water** and transfer into the manufacturing vessel.						
11	Dissolve **3.60kg** of **Calcium D panthotenate** in **50litres** of **purified water** and transfer into the manufacturing vessel.						
12	Dissolve **25kg** of **Ferrous fumarate** in about **100 litres** of **purified water** and transfer into the manufacturing vessel.						
13	Dissolve **0.0125kg** of **Cyanocobalamin** in **10litre** of **water** and add to the mixture in the manufacturing vessel.						
14	Dissolve **0.75kg** of **Ascorbic acid** and **22.85** of **Citric acid** in about **50ltrs** of **purified water** and add to the bulk						
15	Make up to **2500 litres** of volume with **purified water** and stir.						
16	Pass the mixture through the homogenizer to obtain uniform preparation; transfer into holding tank.						
17	Complete the request for analysis form and send to the quality assurance department.

LINE CLEARANCE – LIQUID FILLING & PACKING AREA
SOP No.: BML-PDS-PR-015/017

Previous Product:	**Batch No.:**	
Check List	Checked by (Production)	Verified by (QA)

Area Cleanliness (walls, ceiling, floor)		
Check Equipment Cleanliness-		
Accessories cleanliness (Scoops, drums, pallets, stools etc.,)		
Absence of previous product / batch materials in all areas and machineries (Glass bottles, ROPP Caps, Measuring Cups, Labels, Mono-carton, Shippers, Leaflets, Shrink Wrap sleeves, BOPP tape)		
Check that all finished goods of the previous batch/product are removed from the line.		
Environmental Conditions: Std Temp: NMT 30±2°C, Actual Temp: °C Std RH : NMT 65±5%, Actual RH : %		
Balance calibration done on date :		

LIQUID FILLING SET-UP

Transfer the Liquid product to the filling line according to SOP

Estimated loss during transfer of the product to the service tank through the pipe/hose .....

Estimated loss during liquid filling standardization .....

Estimated loss during fill volume check .....

Line Set by (QA): Witnessed by (Prod Sup.):

BOTTLE FILLING AND PACKAGING INSTRUCTIONS

Actions	**Done by operator**	Checked by Prod. Sup.
1. Arrange the bottles in the Bottle Washing Machine & wash the bottles.		
2. Check for any breakage & rejection. Remove any such bottles. 3. Take line clearance for line as per SOP No BML-PR-SYP-016 4. Check the volume dispensed from each nozzle initially & periodically every hour. 5. Transfer gradually the released syrup into the floor level reservoir of bottle-filling machine. 6. Adjust the fill volume of the machine to 200 ml of syrup & fill the bottle. 7. Seal the bottle.		
8. Check the bottle by inverting the same against black & white background for any suspended matter & remove any such bottle.		
9. Label the bottle, put plastic cup on the top & put the bottle in overprinted Mono-carton. 10. Put the leaflets in the Mono-carton.		
11. Now arrange 10 mono cartons into the shrink-wrap sleeve and then pass through the shrinking machine by adjusting the appropriate temperature & speed. The dwell time should not exceed 7 seconds. 12. Finally check for the quality of shrinking. 13. Finally arrange 3 rows of shrink-wrapped mono cartons in 2 decks into the coded printed shipper.		
14. After completing the packing of a batch, transfer the packed shippers to Finished Goods store with proper Stock Transfer Note.		

VOLUME CHECK UP FOR THE NOZZLES OF LINEAR ☐ AND MONOBLOCK ☐ FILLING MACHINE

DATE:	Time started:	Time stopped:	**FILLING SPEC.: 196mL– 204 mL**
DATE:	Time started:	Time stopped:	
1. Adjust the volume to not less than the expected final volume.			

2. Cross check using measuring cylinder at delivery point of the nozzles
3. Check the volume of the filled bottle by removing the ROPP cap and measure the content volume using a clean measuring cylinder.
4. Check the volume every 20 - 30 minutes of filling operation
