1.0 PURPOSE

To determine the stability of the commercial batches at the specified condition within which the drug product meets its established specification.

2.0 SCOPE

This design is applicable to batches scheduled for stability studies manufactured by Biomedical Limited at 1 Ohimege Road, Industrial Estate, Ilorin, Kwara State.

3.0 REFERENCE

- ICH Stability Guidelines (Q1 series)

4.0 STUDY SITE

Biomedical Limited, 1 Ohimege Road, Industrial Estate, Ilorin, Kwara State.

5.0 RESPONSIBILITY

Chemist, Microbiologist, Quality Control Head.

6.0 COMMITMENT

For an established product, testing will be conducted yearly, and at least one batch per year of the product manufactured will be included in the stability programme. In cases where a high number of batches are manufactured in a year, then long term stability studies can be forgone for an accelerated study.

8.0 STUDY DESIGN

The study design is based on the requirements detailed in ICH Guidance and covers storage of the product under the accelerated, intermediate and long-term storage conditions. An intermediate storage conditions is included to provide supporting data in the event that data proof of stability is required at any time point within the shelf-life of the product. Samples stored under the long term storage condition may be tested up to 4 years (48 months). Samples stored under the accelerated storage condition will be tested up to 6 months. Intermediate samples will be tested 'On Demand' whenever required.
The samples will be stored in the primary and secondary packaging components that are intended for marketing.

9.0 STUDY STORAGE CONDITION AND TESTING TIME POINTS for Zone IVb

a. Primary batches on accelerated ambient stability study

Storage requirement	Storage condition	Time points
accelerated	40°C ± 2°C & 75 % ± 5 % RH	0, 1, 3 and 6 months (at least 0, 3,6)

b. Primary batches on long-term stability testing (intermediate)

Storage requirement	Storage condition	Time points
Long-term	30°C ± 2°C & 65 % ± 5 % RH	0, 6, 9, 12 months.

c. Subsequent batches (long term)

Storage requirement	Storage condition	Time points
Long-term	30°C ± 2°C & 65 % ± 5 % RH	0, 3, 6, 9, 12, 18, 24, 36 months.

CONTROL COPY

DISCLAIMER: Soft Copy with the Server and Hard Copy with the Controlled Document Stamp and Signature of Quality Assurance Manager only are 'Controlled Documents', all other forms are 'Uncontrolled and Invalid'.

d. Established product, long term (after 5 years)

Storage requirement	Storage condition	Time points
Long-term	30°C ± 2°C & 65 % ± 5 % RH	0, 12, 24, 36 months

10.0 TEST PARAMETERS

Samples will be test as per test detailed below using methods detailed

S/No	TEST PARAMETERS
1	ASSESSMENT OF PACKAGING MATERIAL
2	DESCRIPTION
3	IDENTIFICATION
4	pH
5	ASSAY
6	MICROBIOLOGICAL EXAMINATION
7	Particulate contamination: visible particles (infusion)
8	

ANALYTICAL METHOD USED: VALIDATED STPs

11.0 SAMPLING PLAN

ORAL LIQUIDS

STABILITY CONDITION	TIME POINT (MONTHS) AND SAMPLE QUANTITY PER INTERVAL (IN BOTTLES)													total
	0	3	6	9	12	18	24	36					additional	
Accelerated	3	3	3	-	-	-	-	-					3	12
Subsequent	3	3	3	3	3	3	3	3					3	27
Intermediate	3	-	3	3	3	-	-	-					3	15
Established	-	-	-	2	-	-	2	2					2	8

LARGE VOLUME PARENTERALS

CONTROL COPY

DISCLAIMER: Soft Copy with the Server and Hard Copy with the Controlled Document Stamp and Signature of Quality Assurance Manager only are 'Controlled Documents', all other forms are 'Uncontrolled and Invalid'.

STABILITY CONDITION	TIME POINT (MONTHS) AND SAMPLE QUANTITY PER INTERVAL (IN BAGS)													total
	0	3	6	9	12	18	24	36					additional	
Accelerated	3	3	3	-	-	-	-	-					3	12
Subsequent	3	3	3	3	3	3	3	3					3	27
Intermediate	3	-	3	3	3	-	-	-					3	15
Established	2	-	-	2	-	-	2	2					2	8

12.0 ACCEPTANCE CRITERIA

Testing at all time points must comply with the limits as detailed in the product specification.

A significant change is considered to have occurred if:

- The assay value shows a 5% decrease compared with the initial assay value of the batch.
- Any specified degradation product is present in amounts greater than its specification limit
- The pH limits for the product are no longer met
- The specification for appearance and physical properties, e.g., colour, phase separation, caking, are no longer met.

13.0 NON-CONFORMANCE

Mention the details of any non-conformance observed during the stability report

14.0 CONCLUSION

Based on the interpretation of the results, draw the conclusion in the report (summary).
